

The elements i used when creating this wireframe were....

basic fonts (Times new roman, sans serif, etc.) for the content and links

the colours i would use for my site would be very basic and not all over the place to match the theme of my restaurants website (pink, purple blue)

some pictures and backgrounds i would use would be ones that looked appetizing of the food. I would scatter my top 3 images along the top so that it was clear the type of cuisine we provided

I would include a photo of the food and drink menu
